A personal introduction

PhD work (2000-2004)

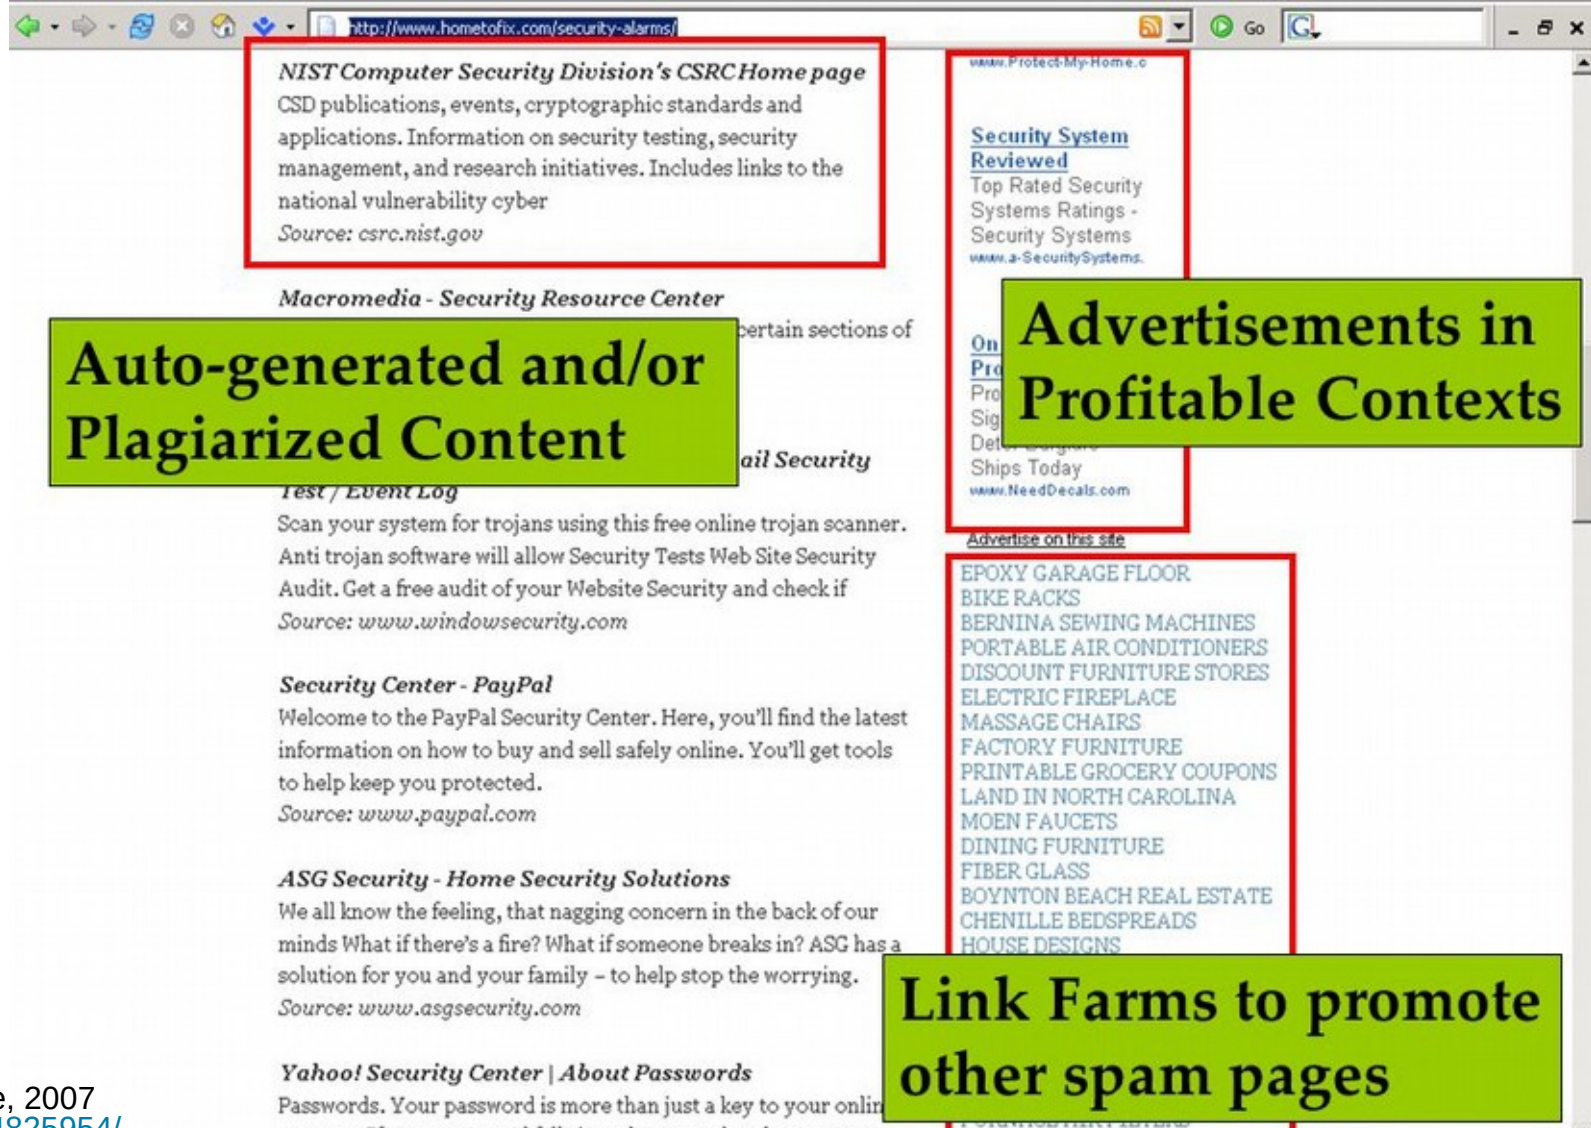

- Collecting web pages
- Characterizing national web domains
 - Chile, Korea, Greece, Spain ...

Top domains in .es (~2006)

Post-doctoral work (2005-2009)

- Web spam pages
 - Pages created to deceive search engines
 - Attract traffic by stuffing themselves with keywords
 - Increase link score of other pages
 - Methods evolve all the time, how to catch them?

Eureka! Moment 2006

Use *gnuplot* to
visualize an
annotated dataset

White: non-spam

Black: spam

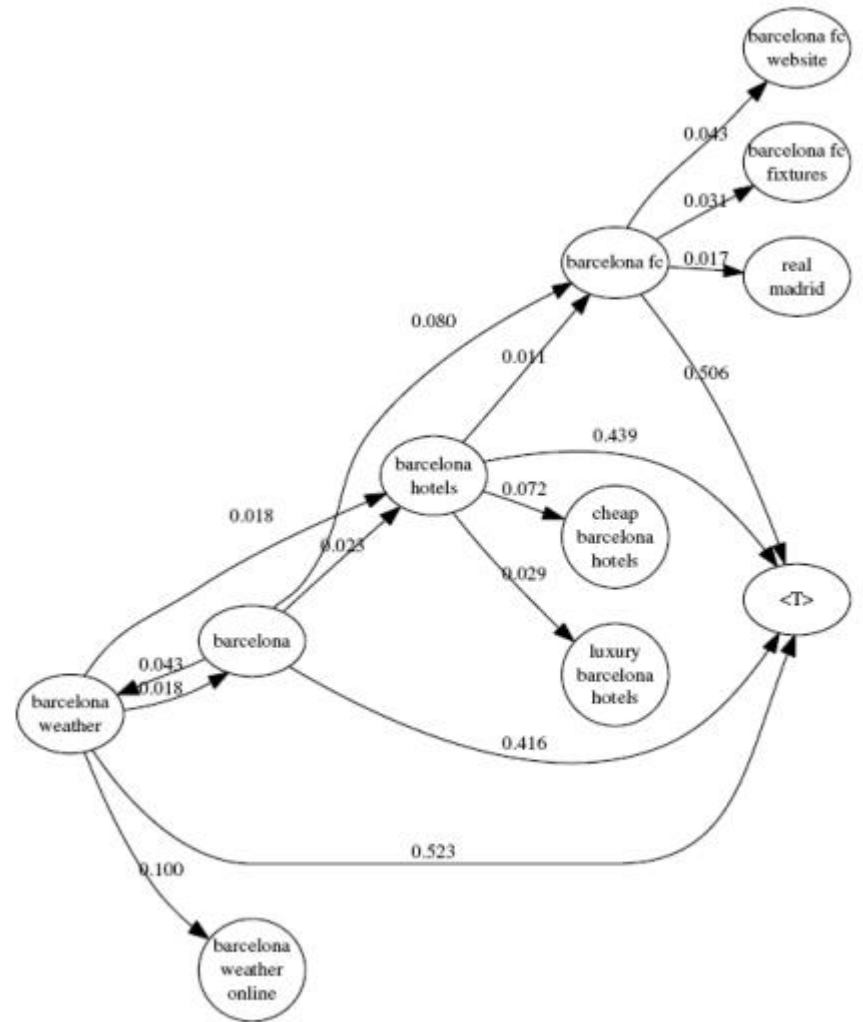

Query flows

2008

What is the most likely query before or after another query?

How are they connected?

Graphs in my own work

- Characterizing national web domains
- Finding web spam pages
- Suggesting queries to searchers
- ...
- Currently:
 - part of a larger toolbox
 - skeptical about structural-only conclusions

Network Science

Wikipedia definition

- **Network science** is an academic field which studies **complex networks** such as
 - telecommunication networks, computer networks, biological networks, cognitive and semantic networks, and social networks,
- considering
 - distinct elements or actors represented by **nodes** and
 - the connections between the elements or actors as **links**.

Complex systems

- Many interconnected parts
- Complicated arrangement of connections
- Emerging properties

Behind every complex system there is a complex network

- Connections between neurons in the brain
- Interactions between genes and proteins
- Family/friendship links in human and non-human animals
- Infrastructure of telecommunications, electricity
- Commerce/trade networks

Human brain: $|V| \simeq 90 \times 10^9$

Regions in the human brain

**Homo
Sapiens**

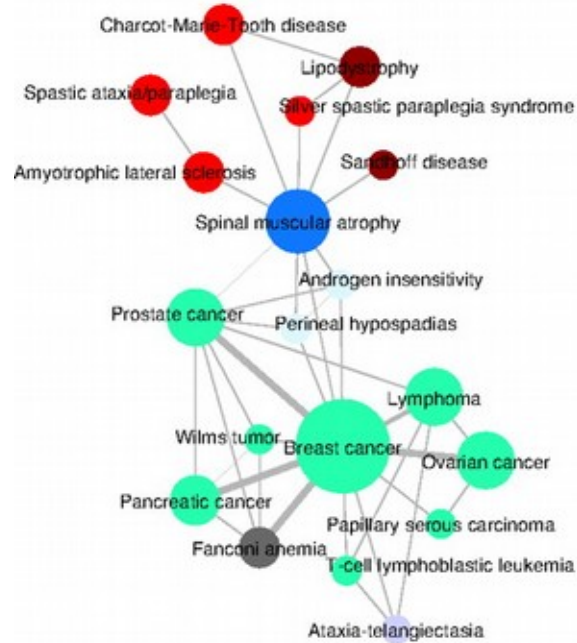

**Drosophila
Melanogaster**

Gene networks

Human disease network

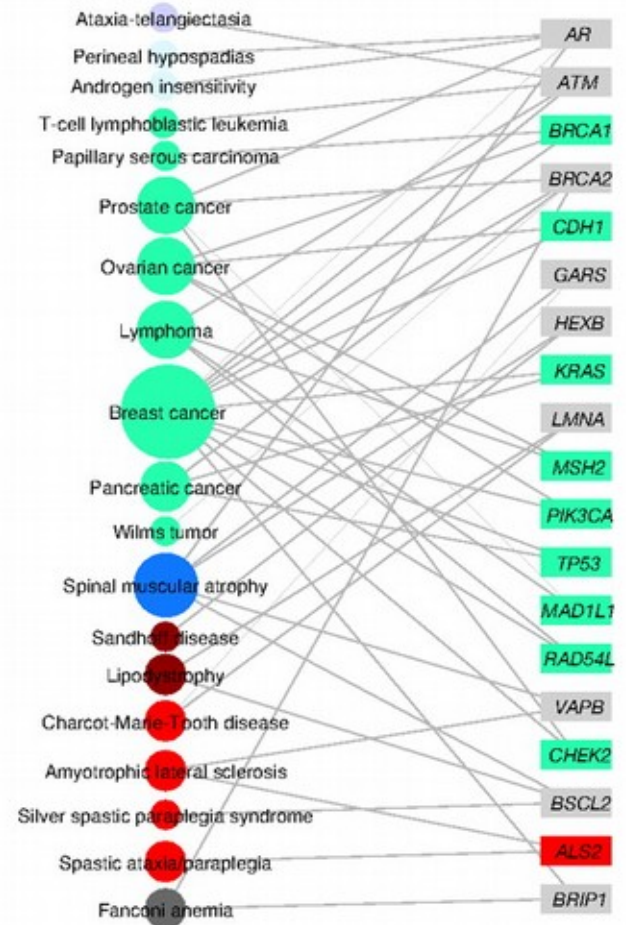

Human Disease Network (HDN)

DISEASOME

disease phenotype

disease genome

Moreno's sociograms

- Early 1930s
- Children in 2nd grade
- Who would you like to sit with?

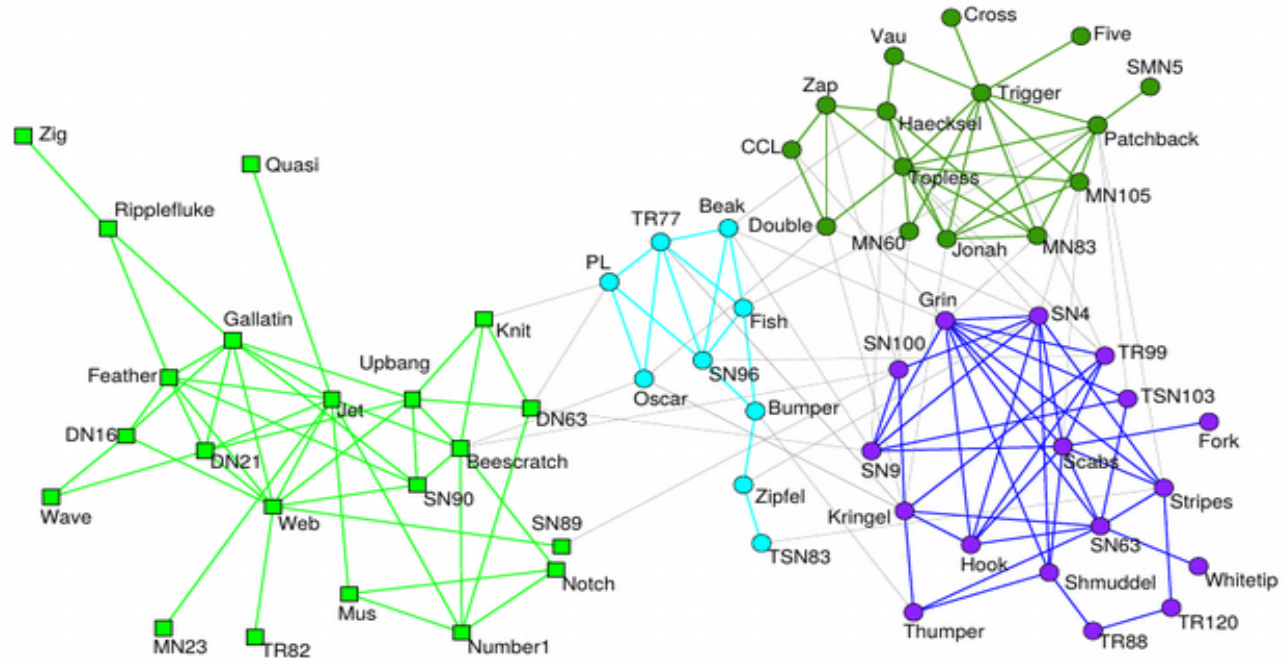

Chains of affection

- Early 2000s
- Adolescents in high school
- A “*special romantic relationship*” or a “*nonromantic sexual relationship*” in the past 18 months

Bearman, P. S., Moody, J., & Stovel, K. (2004). Chains of affection: The structure of adolescent romantic and sexual networks. *American journal of sociology*, 110(1), 44-91.

Dolphins in a fjord in New Zealand

- Research following a school of dolphins in the wild (2003)
- Look for dolphins swimming together
- Found **long-lasting associations**; research has been repeated with other non-human animals (e.g., sheep)

Zachary's Karate Club

Karate club that
split into two
clubs

(led by 1 and 34)

1,000 Somali Users of Facebook

400,000 Twitter Users

Universality of complex networks

“A key discovery of network science is that the architectures of networks emerging in various domains of science, nature and technology are similar to each other, a consequence of being governed by the same organizing principles.”

(Barabási 2016)

Characteristics of network science

- **Interdisciplinary**; indeed we often address problems from disciplines other than CS
- **Empirical** and data-driven; it is based on the observation of networks
- Quantitative, mathematical, **computational**

What can you do with this?

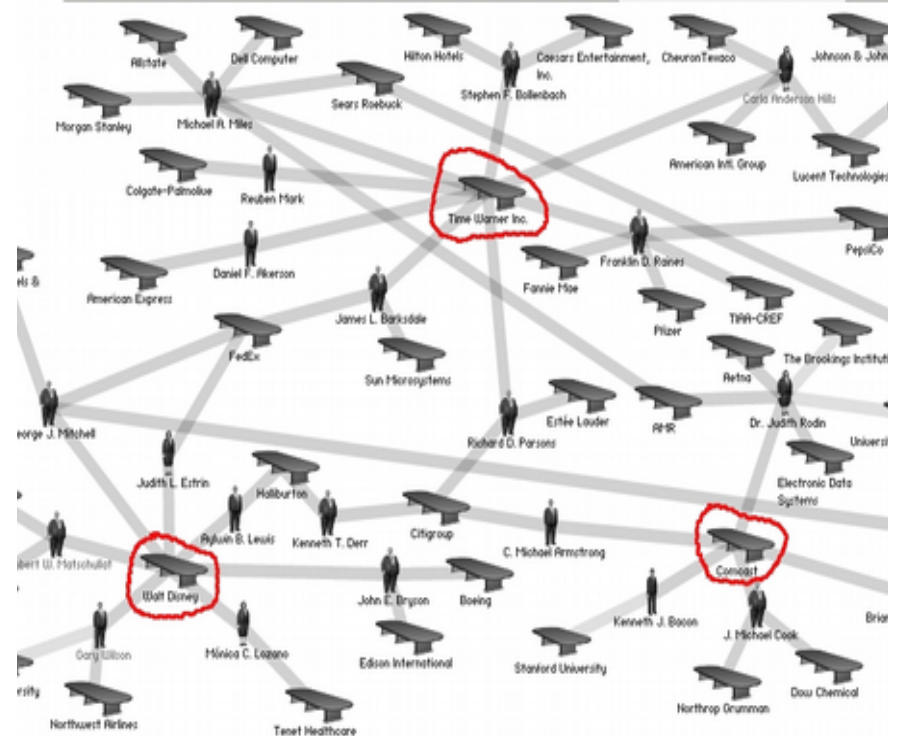

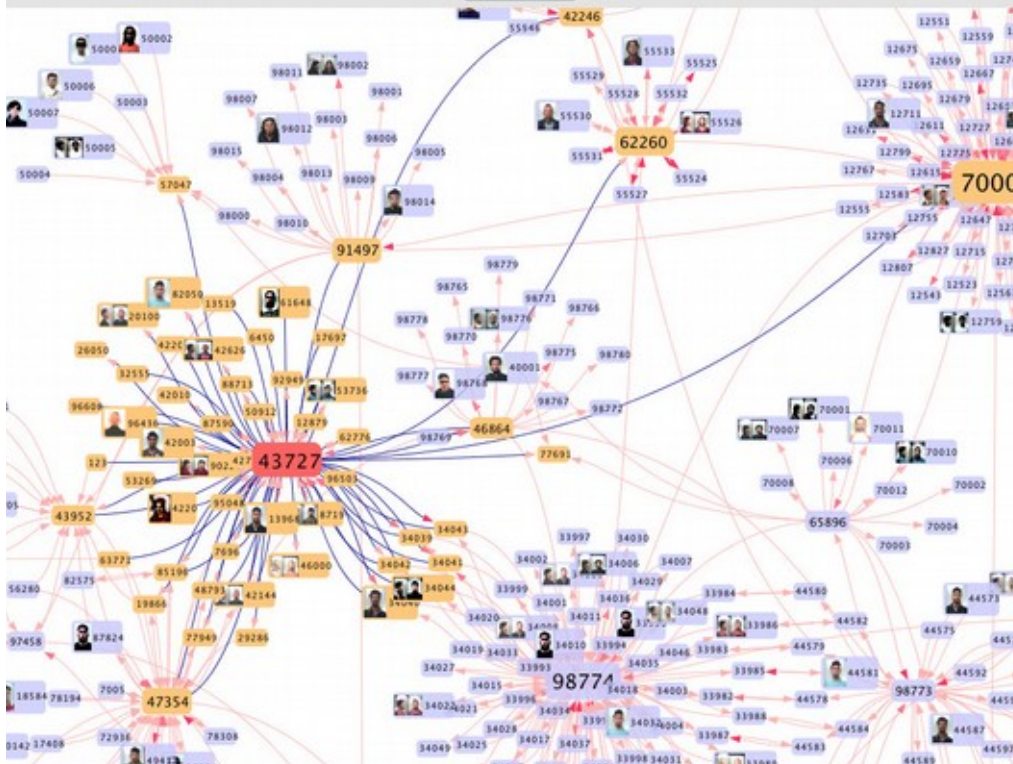

- Help design new treatments and drugs
- ...

Help to forecast epidemics

<https://www.youtube.com/watch?v=mm2u9RKwgsY>

Help understand an organization, a society, or a brain

What can you do with this?

- Help design new treatments and drugs
- Help fight organized crime and corruption
- Help to forecast epidemics
- Help to understand an organization, a society, or a brain

What you can learn in this course

- To describe a network in formal terms
- To identify it as such and characterize it
- To visualize different networks
- To operate with networks programmatically
- To find important nodes and communities
- To make discoveries or help others make them
- **Much more (to a large extent, it's up to you!)**

Organization of the course

- Theory sessions:
 - Help you understand how to model complex networks
 - Help you find important nodes, communities, and track influence
 - Follow “Network Science” by Barabási
- Practice sessions:
 - Help you work with complex networks
 - Manage and analyze graphs in Python
 - New material
- **My focus is on what I think has value for you as a data scientist**
